

Shamrock Systems Increases Efficiency and Safety for Food Manufacturer

About

Equipment Vendor: MPI Magnetic Products, Inc.

Industry: Food

Product: Sliced Bread

Customer Challenge(s)

The customer sought a solution regarding efficiency for automatic bread slicing. Their previous process included removing already-packaged loaves from their plastic bags and metal twist ties. Then, they would pour the bread into a tote bin for reprocessing. Sometimes, the metal ties would fall into the totes and get into the next batch of bread.

Customer Comments

The solution presented by Shamrock and MPI worked so well, we have ordered an additional unit.

Vendor Solution

Shamrock Systems and MPI worked together towards a solution for the customer. They installed a stand-mounted chute magnet to allow the loaves of bread to flow through. The dual magnets in the chute remove the metal twist ties, preventing them from falling into future batches.
