

Shamrock Systems Provides Productivity Solution for Whiskey Distillery

About

Equipment Vendor: KWS Manufacturing

Industry: Food & Beverage

Product: Whole Grains

Customer Challenge(s)

The customer was looking for a solution to help control the flow of whole grains during their production process. Their existing hammer mill was frequently over-fed and plugged, slowing down their productivity.

Customer Comments

We enjoyed our experience with KWS during our first project, so it was a no-brainer to return to them for our second mill project.

Vendor Solution

Shamrock Systems worked with KWS to provide a new screw feeder with a shaft-mounted drive. This piece of machinery allows the customer to fine-tune the feeder's rotational speeds using a variable frequency drive to deliver the correct amount of grain to the hammer mill.
